

Windows PC

Suitable Package: Lite, Pro or Enterprise

Suggested Hardware:

A touch screen monitor with a Windows PC. This will give users a big screen experience giving a smooth user experience. Example touch screen [Hanns G 21.5 inch](#) Will also work with a standard monitor and keyboard if preferred.

OR

A Windows tablet, the Microsoft Surface Go is a popular choice and recently we have clients using the CHUWI Hi10 which they report works well.

Windows doesn't need any specific hardware as long as it is connected to the internet and capable of running a browser, Firefox. Running Windows Pro OS would be preferred.

For Pro/Enterprise:

Label Printers:

If you are planning to print labels for users you will need a printer, any Brother QL printer would be suitable. QL700 would be best suggested based on our testing and costs. [Click here.](#) (Requires USB connection)

Other QL Printers. 810W [See here.](#) Or 820NWB [See here.](#)

Scanners:

If you are planning to allow users to sign in and out via a barcode (which can be printed on the visitor or contractor badges) then you will need a barcode scanner, our suggestion is [this.](#)

Fob/Card readers:

If you already have fobs or magnetic cards, you need to ask your supplier for a USB reader with keyboard output. One of the market leaders is Paxton, if you are using [Paxton fobs](#) for signing in and out, you can then buy this [Paxton reader.](#) The reader must have a keyboard out function.

An alternative option which we have trialled in the office is this [fob and card reader.](#)

Web Camera:

If you are planning to take photos of visitors you will need a web camera.

We ourselves use a [Logitech C920 webcam](#) But here are a couple of budget options [Microsoft Life Cam](#) or [Logitech C270](#)

Apple iPad

Suitable Package: Lite

Any iPad would be suitable to run DigiGreet as long you are not planning to use any additional peripheral devices such as badge printing, fob scanning or barcode scanning.

We are currently working on adding Printing and Barcode Scanning which will be available in the future.

The iPad needs to be running Safari and for best user experience we would avoid the iPad Mini.

Stands:

Tablets have a variety of stands depending on your needs from something very simple as [this](#), to something more complicated.

If security is a problem you can secure the tablet using a security cable such as [this](#).

Armourdog also provide a solution which is flexible on the tablet you are using but is also lockable and secure on a desk, [click here](#).

Not the package you are after, wanting to badge print or scan in (Pro or Enterprise)?

[Check out our best suggestion for this.](#)

Alternatively contact us to discuss your needs on 01865 556070 or drop us an email info@digigreet.com

Android Tablet

Suitable Package: Lite, Pro*

Any android tablet should be more than capable of running DigiGreet without printing.

It is worth noting that Android does not have a full screen mode, so you would need to download an additional Google Play Store App to remove the address bar e.g. [Full Screen Browser](#)

Best suggestion. For best user experience it should be running a minimum of Android 7+, with a 10 inch screen.

Please remember to have the usb sockets and power that you need. If the tablet you are looking at only has one usb socket and this is used for power, you won't be able to attach another device such as a fob or barcode scanner.

Please note that if you are wanting to print badges we are no longer recommending Android as it seems to have too much difficulty connecting to the Brother label printer.

Stands

Tablets have a variety of stands depending on your needs from something very simple as [this](#), to something more complicated.

If security is a problem you can secure the tablet using a security cable such as [this](#).

Armourdog also provide a solution which is flexible on the tablet you are using but is also lockable and secure on a desk, [click here](#).

*We do have clients printing using Android but it seems that it's not easy/supported. The issue is not with DigiGreet, the issue is getting the Android device to see and print to the printer.

Not the package you are after, wanting to badge print or scan in (Pro or Enterprise)?

Other

Had something in mind or already have some hardware you would like to use why not give us a call or drop us an email at info@digigreet.com so we can understand your needs further and see if what you were thinking would be suitable.

What clients say?

"We found Digigreet visitor management system from OFEC online and can honestly say it is a brilliant and simple solution for visitors and staff for our business. It looks a lot more impressive than an old book to sign in for customers plus great for our emergency evacuation procedures. The support team are exceptionally quick with any questions we have as well. Highly recommended.." - Adrian from Coco Lighting
